## **The Company**

Nanoraptor is an Opticsvalley's incubated company.

Nanoraptor develops an innovative technology for optical visualisation at nanometer scale.

Its consumables allow a 100-fold increase of an optical microscope sensitivity, in particular for observation of ultra-thin films, very small objects and biological molecules.

This technology relies upon surfaces with special optical properties - called surfs - on which the sample to observe is laid. It addresses the needs of nanotechnologies.

- 

## **AREAS FOR POTENTIAL COLLABORATION**

**Nanoraptor is actively seeking collaborations and partnerships with commercial and scientific groups:**

- 1) Instrumental co-development
- 2) Distribution partnership
- 3) Optical multilayer fabrication
- 4) Co-development of specific applications
